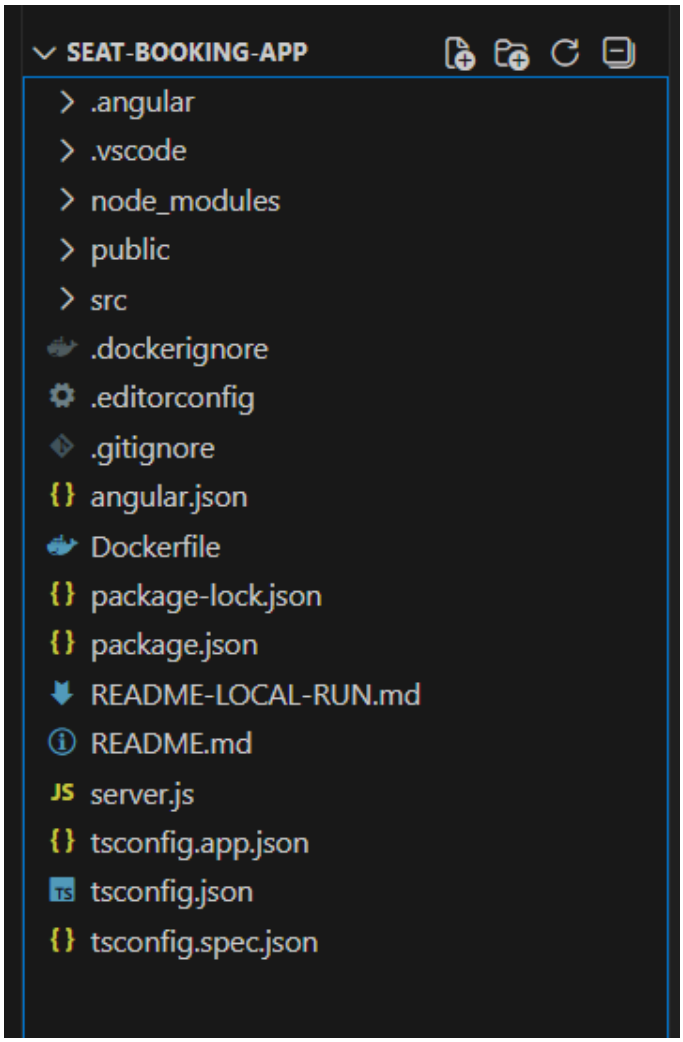
Angular Project Structure



Docker file

```
# Stage 1: Build stage
FROM node:20-alpine AS builder
WORKDIR /app
# Copy package files
COPY package*.json ./
# Install dependencies
RUN npm ci
# Copy application source code
COPY . .
# Build the Angular application
RUN npm run build
# Stage 2: Production stage
FROM node:20-alpine
WORKDIR /app
# Install express for serving the app
RUN npm install express
# Copy built application from builder stage
COPY --from=builder /app/dist/seat-booking-app/browser ./dist
# Copy server script
COPY server.js .
# Expose port 4200
EXPOSE 4200
# Set environment variables
ENV NODE_ENV=production
# Health check
HEALTHCHECK --interval=30s --timeout=3s --start-period=40s
--retries=3 \
  CMD node -e "require('http').get('http://localhost:4200', (r) => {if
(r.statusCode !== 200) throw new Error(r.statusCode)})"
# Start the application
CMD ["node", "server.js"]
```

Conclusion

This assignment successfully covered modern web application deployment. We utilized GitHub for version control and defined a multi-stage Docker environment with a Dockerfile optimized for an Angular application. This setup ensures efficient building and reliable containerization, demonstrating proficiency in modern development workflows for the Angular project.
